## 1 Introduction

The Inventek ISMART (Inventek **S**ystems **M**odule **A**rduino **T**est) IoT platform is a user-friendly Arduino compliant shield suited for all of your wireless application needs.

The ISMART platform enables customers to quickly launch IoT products based on a host MCU of your choice and Broadcom's Wi-Fi, BT/BLE and NFC combo radios. The robust user friendly Inventek AT command set FW, IWIN (Inventek Wireless Interoperability Network), makes it easy to take any Host microcontroller and communicate with any Inventek eS-WiFi (embedded Serial Wi-Fi), module, thus allowing customers to quickly get a Wi-Fi connected application up and running.

The document provides a detailed hardware requirements overview and all associated board connections for ISMART.

## 2 Overview

The ISMART shield is an embedded wireless internet connectivity platform that operates in the 2.4 & 5.0 GHz spectrum. The ISMART hardware includes the option for an Inventek eS-WiFi module consisting of the Broadcom BCM43362 (2.4GHz), or BCM43341/0 Dual-Band (2.4GHz / 5GHz) 802.11 a/b/g/n MAC/Baseband/Radio with Integrated Bluetooth 4.0 and NFC.

The ISMART shield is compatible with the Arduino UNO R3 connector layout. The Inventek eS-WiFi module options supported by ISMART require no operating system and contain an integrated TCP/IP stack. The Inventek eS-WiFi modules can be used with Inventek's AT Command Set FW, IWIN (Inventek Wireless Interoperability Network), or with Broadcom's WICED™ (Wireless Internet Connectivity for Embedded Devices ), SDK 3.1.2 or later.

### ***ISMART Hardware Features:***

- Uses the Inventek ISM43341/0 or ISM43362 eS-WiFi modules leveraging Broadcom's leading edge radio devices.
- Includes an ST Microcontroller Cortex M3 STM32F204 (ISM43362) or Cortex M4 STM32F405 (ISM43341/0), MCU.
- Bluetooth 4.0 including BLE support.
- 2.4GHz (ISM43362) or 2.4/5 GHz (ISM43341/0), chip antenna on module.
- U.FL external antenna connector option for both modules
- Configurable using Inventek AT Commands FW (IWIN).
- Host interface: UART, SPI.
- Input Power: 5.0 V

- Near Field Communication (NFC option), with the ISM43341/0 modules.
- Dual Port FTDI for firmware development and testing.
- SPI Flash for Over The Air (OTA) updates
- FCC, IC and CE approval on all module options.
- All eS-WiFi module options also support a standard L44 form factor to enable customers to migrate between module options once in mass production without requiring any board layout changes.

### 3 Hardware Requirements

The ISMART (Inventek **S**ystems **M**odule **A**rduino **T**est) Shield plugs directly onto a target Host Arduino compatible MCU:

**Figure 3.1 Inventek ISMART & ST Micro STM32 Nucleo example:**

- The Inventek ISMART plugs directly onto any target STM32 Nucleo board.

The interconnection between the STM32 Nucleo and the ISMART Shield can be configured as a UART or SPI interface.

## 4.0 System Requirements

The ISMART Shield requires the following hardware:

Option 1: Communicating using STM32 Microcontroller

1. Windows PC to install target MCU software package
  - a. Example: X-Nucleo-ISMART-XXX for the **ISMART & STM32 Nucleo**
    - i. Any target ST Micro Nucleo board
    - ii. Target MCU Design Environment SW
      1. Example: X-CUBE-ISMART firmware for the **ISMART & STM32 Nucleo**
        - a. Related documents found on ST.com

Option 2: Communicating using PC over USB for evaluation

1. Windows PC to install Inventek [PC Demo software](#)
  - a. Load Drivers on Windows PC
  - b. Send AT commands using demo software

## 4.1 ISMART Architecture (Top/Bottom)

## 4.2 ISMART Components

Position	Description	Case
U18	eS-WiFi	ISM43362-M3G or ISM43340-M4G or ISM43341-M4G footprint compatible embedded Serial WiFi module
J5	USB	USB Connected to FTDI to eS-WiFi as a VCOM port for UART or JTAG update. USB Driver required (but not required for the Nucleo board)
LED1	LED	3v3 Power LED
LED2	LED	GPIO3 on eS-WiFi module
LED3	LED	GPIO4 on eS-WiFi module
SW3	3 Position	FTDI 2232 dual UART to eS-WiFi module for JTAG or UART <i>USART1 PA9/10</i> <i>USART2 PA2/2</i>
SW2	Reset	Resets eS-WiFi module
J18	Option	Can be used to connect USART 1 CTS/RTS
R51	Temp.	Thermistor
U10	Flash	External SPI Flash for OTA (Over The Air updates) for the ISM43362 only. The ISM4334x has an option for on board flash
J13	SPI	Selects between SPI I/F or AUX

## 4.3 ISMART Connections

The ISMART Shield connection scheme option:

1. Connects directly to your PC using the Mini USB connector and then run the Inventek IWIN AT Commands FW.
  - a. Power ISMART from USB. On J17, Connect 5V\_BOARD to 5V\_USB.
  - b. [www.inventeksys.com/IWIN](http://www.inventeksys.com/IWIN) download PC demo app and install drivers
  - c. RUN Inventek IWIN AT Commands with Tera-term
    - i. Baud rate: 115,200, Parity None, Data Width 8, Stop Bits 1
    - ii. SW3 in FTDI position 1
2. Plug into the target MCU EVK
  - a. Example: STM Microcontroller board and run the Nucleo software
    - i. Power ISMART from Microcontroller board. On J17, Connect 5V\_BOARD to 5V\_MOD.
    - ii. ST Nucleo SDK
    - iii. SW3 in UART Position 2

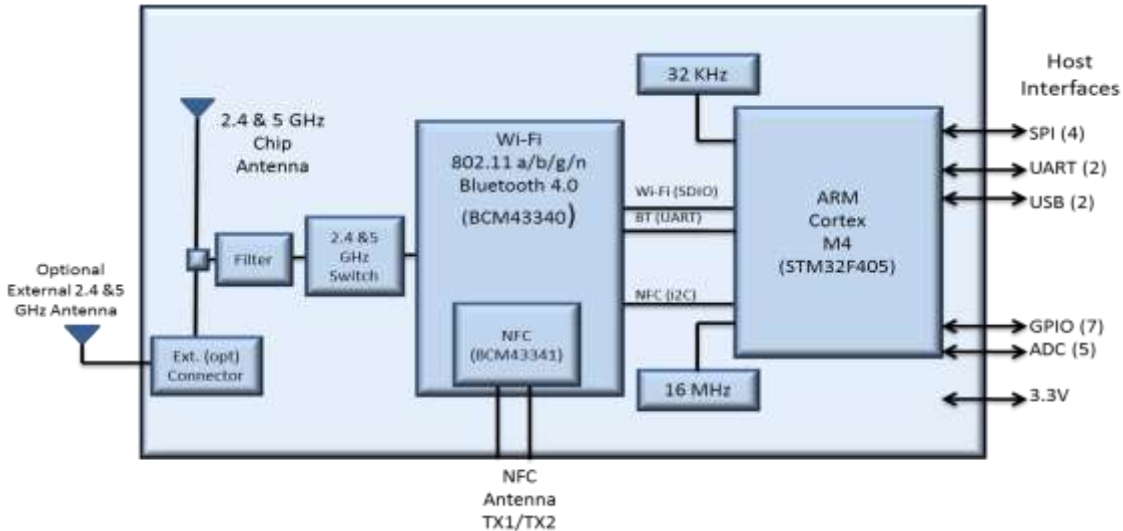

## 4.4 The ISMART–ST Nucleo-Arduino Pin Out Map
